Gender dialogue Sessions (2,496 members completed);
Gender Champions (477 to date);
Gender transformative approaches are Integrated

Linking Agribusiness and Nutrition project (LAN) is implemented by SCI and HKI, and financed by DFID.
Findings & Conclusion

Findings (beneficiaries quote)

“My husband has changed, he would beat us, all women in the household were beaten, but...he has since changed."

“Before children would only eat the feet and other bad parts of chicken. All the good pieces were given to the father...the fathers now prioritize the children.”

Conclusion

The transformation of harmful gender norms and the fostering of cooperation within households can provide a critical foundation for improving nutritional outcomes for women and children <5, and for increasing household food and nutrition security.
